COSMOFOT REDUSTIM

Low-frequency magnetic fields and micropressure

Application Abdominal fat reduction

REDUSTIM consists of a device that is connected to an integral suit covering a large part of the body (from the feet up to the solar plexus). This technique combines two actions: a main action based on the diffusion of low-frequency magnetic fields to stimulate the release of visceral fat; and a secondary draining action facilitating the evacuation of fatty acids through the system circulation and the elimination of toxins. REDUSTIM is an easy to use device. A wave generator transfers energy to the inductors located in the integral suit onto the target areas (abdomen, upper sides of the thighs, internal part of the knees, calves), while its six cells exert an upward pressure for drainage. This promotes a significant and selective reduction in body fat by stimulating biological lipolytic mechanisms. The low-frequency magnetic fields of REDUSTIM boost the fatty-acids destocking in the obstructed adipocytes. REDUSTIM stimulates imperceptible muscle contractions that boost the production of Lipase (HSL), which plays a key role in the hydrolysis of triglycerides and the redistribution of cholesterol in cells.

PALOMAR MEDICAL TECHNOLOGIES, INC ARTISAN™ AESTHETIC SYSTEM

Combination fractional resurfacing

Application Skin resurfacing

The Artisan Aesthetic System provides a combined fractional ablative and fractional non-ablative laser skin resurfacing treatment—the first approach of this kind to receive clearance by the United States FDA. The System includes a 1540 nm or 1440 nm non-ablative fractional laser and a 2940 nm ablative fractional laser for skin resurfacing, and a MaxG™ optimised light handpiece for the treatment of pigmented and vascular lesions. Palomar believes that this specific collection of skin resurfacing and photofacial technologies allows practitioners to tailor a complete skin rejuvenation regimen for each individual client. In 2009, Palomar received the first FDA clearance for the treatment of stretch marks using a fractional laser.

GENOLIER LABORATOIRES

NESCENS

Gels, creams and exfoliation

Application Anti-ageing skin care

Laboratoires Genolier have created NESSENS, an exceptional anti-ageing cosmeceutical skincare system. NESSENS products have been specifically designed to bring a rational and efficient cosmeceutical answer to the biological factors responsible for cutaneous deterioration caused by ageing. This cutting-edge programme required 2 years of development. It comprises eight skincare formulas to date, and contains, at concentrations above that of traditional cosmetics, the most efficient active

ingredients, coming straight out of biomedical anti-ageing research. With NESSENS, Laboratoires Genolier marks the return of Swiss private clinics in cutting-edge cosmetology. The opportunity is offered to you to participate to the revival of Swiss cosmetics by distributing NESSENS, a brand promised to success thanks to both its positioning and intrinsic qualities.
